

POLY 1000

Installed by TrackSurfaces Company

The Poly 1000(Polyurethane Mat) is a 100% polyurethane-based track system. The paved-in-place base layer provides exceptional shock absorption allowing safe long-term training. The finished track system is a smooth, highly porous surface with excellent all-weather performance characteristics. The low initial cost and the ability to upgrade in the future makes the Poly 1000 track system a great choice for smaller schools looking to stay away from latex polymer based tracks. Track Surfaces Company uses only time-tested polyurethane manufactured by Advanced Polymer Technology, Inc.

The Poly 1000 polyurethane is made in the USA from materials free of mercury and other heavy metals by design.

The Poly 1000 Track System consists of:

- 13 mm Paved EPDM/Polyurethane Binder Base-Mat
- Pigmented Polyurethane in base-mat for U.V. resistance
- Installed Using Specifically Designed Sports Paving and Mixing Machines
- Economical and Up-gradable in Future

All weather usage, excellent resiliency and durability at an economical cost

U.V. resistant polyurethane binder maintains color stability

Paved-in-place polyurethane and rubber base mat for excellent resiliency
