

# POLY 2000M

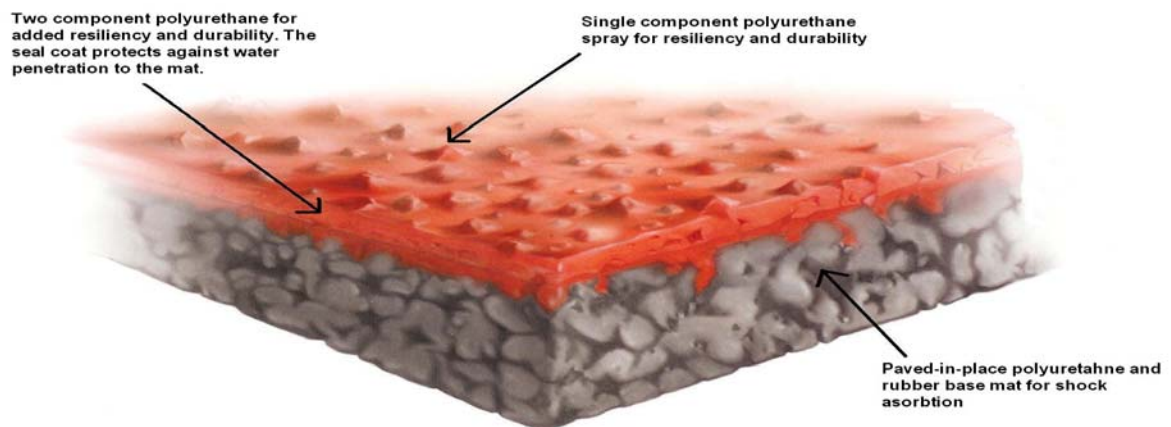

*Installed by Track Surfaces Company*

The Poly 2000M ( Mat/Spray Modified System) is a 100% polyurethane-based track system that offers exceptional all-weather performance and spike resistance. The paved-in-place base layer provides exceptional shock absorption allowing safer long-term training. The two-component polyurethane sealer layer makes this system impermeable and adds increased resilience and durability. Finally, the structural spray coat provides the highly textured and durable wearing layer. The finished track system is a smooth, virtually seamless surface with outstanding performance characteristics and durability. Track Surfaces Company uses only time-tested polyurethane manufactured by Advanced Polymer Technology, Inc.

The Poly 2000M polyurethane is made in the USA from materials free of mercury and other heavy metals by design.

The Poly 2000M Track System consists of:

- 13 mm Paved SBR/Polyurethane Binder Base-Mat
- Impermeable, Two-Component Sealer Layer
- Highly Texturized Pigmented Polyurethane/EPDM Rubber Structural Spray Coat
- Installed Using Specifically Designed Sports Paving and Mixing Machines
- Proven Durability and Low Maintenance
